

Photo printer speed tests: Default photo quality

Printerville speed tests using test documents printed from Adobe Photoshop CS3 at the selected printer's default print quality setting. Each test measures the time taken to print, from the moment the printer grabs the sheet until the sheet is ejected from the device. All tests are performed five times and the results averaged.

Tests run on a Mac Pro with 4GB of RAM, Mac OS X 10.5. Copyright ©2008 Printerville.net. All rights reserved.
